

# **TASK 5 – Cybercrime Awareness Case Study & Prevention Guide**

## **Part A – Case Study**

### **Phishing Attack Example**

Phishing is one of those cybercrimes where fraud guys trick others into giving their personal information like passwords, bank info, or OTPs. They act like someone you can trust, for example bank or Amazon.

For example, a student may get an email saying that their bank account needs urgent verification. The email looks real and may even have logos as well a link. When the student clicks on that link, it opens a fake website which looks similar to the original website.

If the student enters their login details, the information goes to the attacker. While, the attacker may also ask for an OTP and use it to complete a transaction.

Students are best targets because they use online apps and websites a lot and because of this, phishing can lead to problems like loss of money, someone else using your identity, or your accounts getting hacked.

These types of cybercrime which usually happen through emails, messages, or social media, so it is important to stay careful while using the internet.
